

Smarter Resurfacing

Why Clinica Lase Founder CRYSTAL PATEL Invested in the Deka Tetra PRO

At Clinica Lase, founder Crystal Patel has always taken a forward-thinking approach to technology, one that blends science, strategy, and skin integrity. As a nurse and trainer with years of clinical experience, Crystal is selective about what makes it onto the Clinica Lase treatment menu.

So, when the opportunity arose to bring the Deka Tetra PRO CO₂ laser into the fold, the decision was intentional.

Why Deka?

"We've always been focused on offering the most advanced technology with proven results," says Crystal. "What really stood out with the Deka Tetra PRO was its versatility and precision. The ability to customise treatment depths and densities with such accuracy means we can treat a broader range of skin types and concerns, safely and effectively."

Unlike some CO₂ systems that offer limited control, the Tetra PRO gives the Clinica Lase team the freedom to tailor every treatment, from subtle rejuvenation to intensive resurfacing with confidence.

A Philosophy-Driven Investment

For Crystal, the device had to align with the clinic's treatment philosophy — results without unnecessary downtime or damage.

"At Clinica Lase, we're not about over-treating, we're about treating smarter. The Deka allows us to achieve noticeable outcomes while still respecting the skin barrier. That matters to us, and it matters to our patients."

This balance between performance and recovery was a key factor in choosing the device, especially as more patients request treatments that deliver without disrupting their lifestyle.

Meeting Evolving Patient Needs

Clinica Lase has seen a growing number of patients seeking improvements in texture, scarring, and fine lines, but with a preference for less invasive solutions.

"The Deka Tetra PRO met that demand. We can offer light, skin-refreshing protocols like CoolPeel for patients who want a glow with minimal downtime, as well as deeper treatments when required," explains Crystal.

This versatility has made it possible to personalise resurfacing plans, improving client satisfaction and broadening the clinic's appeal to both new and returning patients.

Real Results, Minimal Downtime

Since introducing the Tetra PRO Crystal and her team have already seen strong feedback.

"The response has been overwhelmingly positive. Patients are loving the refined texture, clarity, and post-treatment glow. Even after lighter treatments, they're seeing results. And on the clinical side, we've achieved excellent outcomes for scarring, rejuvenation, and fine lines, all with manageable downtime."

It's this combination of efficacy and client comfort that's positioned the Tetra PRO as a standout addition to the clinic.

Advice for Other Clinics

As a respected trainer and business owner, Crystal says the key to choosing new technology is simple, start with your patients.

"Listen to what they're asking for. Look at the gaps in your treatment offering. Then choose a device that delivers not just results, but aligns with your clinic's values," she says.

"Technology is evolving quickly, but not all devices are created equal. Flexibility, science-backed performance, and strong manufacturer support make all the difference."

With the Deka Tetra PRO now in rotation, Clinica Lase continues to lead the way in skin health innovation, combining medical insight with a personalised, patient-first approach. 🌿
